SUBJECT: Phase 1 Prototyping Allocation: Project Aegis / V-Nexus Ecosystem

FROM: Wichawoot Marholarnkij, Joe's Brother System Integration

TO: [Contractor / Manufacturing Partner Name]

MESSAGE:

We are moving past the concept phase and initiating immediate hardware prototyping for the V-Nexus Counter-UAS and defensive swarm architecture (Project Aegis). We are not interested in reinventing the wheel; we need rapid integration of our AI swarm architecture with your kinetic interceptor and sensor platforms.

Joe's Brother has authorized an initial allocation of **$10,000,000 USD** for the Phase 1 build.

This funding is strictly designated for the following deliverables:

1. **Tier 1 Sentinel Integration:** Mounting and stabilizing EO/IR and miniaturized AESA radar on a high-altitude platform to act as the primary node.
2. **Tier 2 Interceptor Swarm (Hardware):** Production of the initial kinetic quadcopter interceptors, specifically solving the SWaP-C (Size, Weight, Power, and Cooling) limitations for the edge-computing payload.
3. **API/Firmware Handshake:** Ensuring your flight controllers seamlessly accept the C# MAVLink commands from our proprietary Ethical Kill Chain logic.

The software architecture and ethical target discrimination AI (Biological Override / Hardware-Only confirmation) are already drafted on our end. We need you to provide the physical vehicles capable of executing the intercept.

Review the attached high-level system specifications. If your fabrication facilities can meet this timeline and budget, reply with your proposed sprint schedule. We are ready to deploy this to the environments that need it now.

Regards,

Wichawoot Marholarnkij
